

Ember

User Manual

Ember

Ember

Size: 62mm X 33.5mm X 23mm

Material: Zinc alloy

Threaded connection: 510

Specification

1. 0.69 inch OLED screen.
2. Operating Voltage: 3.2V - 4.2V.
3. Maximum Output Current: 25A.
4. Operating Wattage: 5.0W - 50.0W.
5. Temperature control range: 200°F - 600°F / 100°C - 300°C.
6. Temperature control atomizer working resistance range: 0.1ohm - 1.0ohm.
7. Power mode and Temperature control atomizer working resistance range: 0.1ohm - 3.0ohm.
8. Bypass mode atomizer working resistance range: 0.2ohm - 3.0ohm.
9. Atomizer Short Circuit Protection.
10. Low Voltage Protection when the batteries reach a voltage 3.2V or lower.
11. Overheat Protection.
12. Overcurrent protection
13. Overtime Vaping Warning.
14. Built-in 1500mah high rate battery.
15. Charger Required: DC5V / 1A.
16. Charging current: 700mA.

Operation Guide

1. Power on

By pressing the fire button 5 times quickly, the screen will display the "DOVPO" logo. This leads you to the main interface. See picture 1.1 (In Ni200 temperature control mode), see picture 1.2 (In Titanium temperature control mode), see picture 1.3 (In Ss316L temperature control mode), see picture 1.4 (In Power mode) and see picture 1.5 (In Bypass mode).

Picture 1.3

Picture 1.4

Picture 1.5

2. After 30 seconds of inactivity, the device screen will dim. Wake up the device up by pressing any button. After 3 minutes of inactivity, the device will enter low power state.

3. Auto Power-off / Manual Shutdown

- 3.1 The device will power-off automatically after 60 minutes of inactivity, restart the device by pressing the fire button 5 times quickly to begin vaping again.
- 3.2 When in the main interface, press the fire button 5 times quickly, the screen display " GOOD BYE ", and the device will shut down.

4. Start Vaping

- 4.1 See picture 4.1 below in Ni 200 TC mode, use only Ni200 coils in this mode.
- 4.2 See picture 4.2 below in Titanium coil TC mode, use only Titanium coils in this mode.
- 4.3 See picture 4.3 below in SS316L TC mode, use only SS316L coils in this mode.
- 4.4 See picture 4.4 below in Power mode, use non-Temp Control coils in this mode.
- 4.5 See picture 4.5 below in Bypass mode, use no-Temp Control coils in this mode.

5. Work Mode Setting / Hands Mode Setting

When in main interface, press and hold both fire button and "-" button for more than 1.5s, this will lead you into the main menu which you can set the work mode and hands mode. It will allow you to choose the option with the "+" and "-" button. When in the first level menu, by press the fire button will lead you into the second level menu or return to the main interface. When in the second level menu, by press the fire button will allow you to confirm the option and return to the main interface.

6. Wattage Adjustment

When in wattage mode, using the "+" or "-" button will allow you to increase or decrease desired wattage by 1.0W. Holding either button will cause the wattage to scroll more quickly.

7. Temperature Settings

When in any TC mode, using the "+" or "-" button will allow you to increase or decrease desired temperature by 10°F/5°C. Holding either button will cause the temperature to scroll more quickly.

8. Celsius and Fahrenheit Setting

When in a temperature control mode, change from Fahrenheit to Celsius by scrolling to the minimum temperature setting. Then press the "-" button once more to switch to the opposite mode.

9. Replace an atomizer

When replacing an atomizer, the display will show a screen similar to picture 9.1 below,

press the "+" button to confirm that is a new atomizer, press the "-" button to confirm it is the same atomizer and the resistance will be same as previously attached.

NEW + : 0.54Ω
SAME - : 0.23Ω

Picture 9.1

10. Check Resistance by Manual

When in TC modes, press and hold both "+" and "-" button, the device itself will check and display the current resistance. See picture 10.1.

SET RESISTANCE
0.21

Picture 10.1

11. Setting Wattage in TC Modes

When in TC modes, press and hold both fire button and "+" button for more than 1.5s, this will allow you to set wattage directly from a TC mode.

12. Temperature Control Mode

- 12.1 Temperature Control is available for Ni200, Titanium, and Ss316L coil.
- 12.2 The device will only display the correct temperature when using the appropriate mode.
- 12.3 Temperature control coil working resistance range: 0.1Ω - 1.0Ω .
- 12.4 Temperature control range: 200°F - 600°F / 100°C - 300°C .
- 12.5 Please ensure the Ni200, Titanium, or Ss316L coil is at room temperature before locking resistance, or it may read a wrong resistance value (see sections 9/10). Correctly locked resistance is required for proper function.
- 12.6 When in temperature control mode, working temperature of the device is associated with your set wattage. If your set wattage is too low, the temperature while vaping may increase slowly, or never meet the set temperature.

13. Overtime Vaping Warning

The device will automatically stop firing after 10 seconds to protect from firing in a pocket or purse.

14. Low Voltage Protection

- 14.1 If the battery voltage is as low as 3.2v the device will stop working and display "LOW VOLTAGE".
- 14.2 When power on and during vaping with a voltage lower than 2.7v will display "WEAK BATTERY". If the battery capacity is full and display "WEAK BATTERY" . This can be adjusted by using a low-drain/overused battery or it could be caused by poor connection.

15. Short Circuit Protection

If the atomizer has a short circuit, the screen will show "ATOMIZER SHORT" when pressing fire button. Check to make sure your coil head is seated properly if this occurs.

16. Overcurrent protection

When the instantaneously current is too high, the device will stop working and screen will display "OVER CURRENT".

17. Overheat Protection

When the mainboard's temperature is too high the device will stop working and screen will display "DEVICE TOO HOT". Allow the device to cool before resuming use.

18. The screen will display "CHECK ATOMIZER" if there's no atomizer attached to the device or an atomizer that has an open circuit.

19. The screen will display "ATOMIZER TOO LOW" if the resistance of the coil is too low.

20. The screen will display "ATOMIZER TOO HIGH" if the resistance of the coil is too high.

21. The screen will display "DRY COIL NO LIQUID" if there is no liquid in the atomizer during use in a Temperature Control mode.

22. Charging

When charging the battery with micro USB cable, the battery icon will indicate it's getting filled up. The energy grid will display full after battery being fully charged.

Operating Instructions

1. Please use all accessories as intended to avoid damage to your device.
2. Please use the original charging cable, or a quality replacement when charging this device.
3. When not using your device for a long period of time, please turn it off and store it in a cool dry place to prevent damage. Check the battery periodically for signs of discharge.
4. Should damage occur, please do not attempt repair yourself. Use any available warranty, or contact a professional for repairs.
5. Please keep this product and accessories away from children.
6. Please read this manual, and follow it's instructions closely.
7. To clean the device, use only a slightly damp towel, and do not allow moisture to get in the device.
